## (54) PLANE DISPLAY DEVICE

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To prevent a pixel display luminance from being dispersed due to the level of the wiring resistance of lead wires, especially, to prevent the difference of luminance from being visualized even when lead wires remarkably different in wiring resistance are arranged adjacently in a panel display device having so-to-call oblique wiring as input wiring from a driving circuit section arranged at a peripheral part.

**SOLUTION:** A lead wire 1 is provided with a thin wire part 11, by adjusting the length of the thin wire part 11 based on the wiring length of the length of the lead wiring 1, each  $[\text{length of the thin wire part 11 (L1)}] / [\text{width of the thin wire part 11 (W1)}] + [\text{length of a part 12 other than the thin wire part (L2)}] / \text{width of a part 12 other than the thin wire part (W2)}$  is made equal. Thus, the wiring resistance of each lead wiring 1 is made equal.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
